

Navigating the challenges of sustainable transport

Decarbonizing transport is complex and requires a partner who turns challenges into actionable opportunities.

- Each transport mode, whether urban transport, off-road, rail, waterways, or aviation, faces unique operational, logistical, regulatory, and market challenges.
- Effective strategies that integrate technology, business models, strategic partnerships, regulatory alignment, and financing allow organizations to deliver sustainable impact and advance their low-carbon transition objectives.

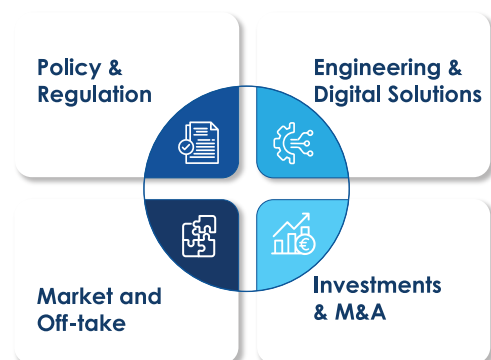

Explore how the different challenges of transport decarbonization can be transformed into high-impact projects

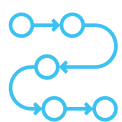

Integrated Solutions for Sustainable Transport

Advancing decarbonization across multiple transport modes through different technological pathways while covering the entire associated value chain

We offer four service areas that accelerate your transition to low-carbon transport:

Our experience spans low-carbon technologies pathways and innovative supply chains, from electrons to molecules.

Making Sustainable Transport a reality

Hinicio transforms transport decarbonization strategies into actionable and high-impact projects across all transport modes, combining deep technical, regulatory and operational expertise.

Hinicio will go deep into the transport decarbonization solution by analyzing both, the infrastructure supply chain and the transport technologies:

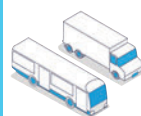

- 01 Project Inception:**
Understand operational requirements and system constraints.
- 02 Technology & Market Analysis:**
Identify and engage OEMs and key suppliers to accelerate implementation.
- 03 Techno-Economic Assessment:**
Provide KPIs and robust business cases to support decision-making.
- 04 Value Chain Optimization:**
Reduce costs, avoid bottlenecks and maximize clean energy integration.
- 05 Tailor-Made Solutions:**
Adapt solutions to local ecosystems, regulations, and effective outcomes.

HINICIO is a leading technical and strategic consulting firm **specialized in hydrogen and derivatives, sustainable transport, and industry decarbonization.**

We advise governments, companies, and international organizations across Europe, the Americas, Asia, Africa, and the Middle East.

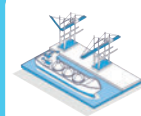

Hinicio has delivered over 100 transport decarbonization studies globally, generating scalable impact across road, rail, maritime, aviation and off-road transport.

Urban and off-road transport:

- Freight and passenger transport
- Logistic fleets
- Material Handling Equipment (MHE)
- Mining Trucks

Waterways:

- Maritime and fluvial transport
- Port infrastructure

Railways:

- Passenger and freight trains
- Metropolitan and long-distance rail network

Aviation:

- Sustainable Aviation Fuel (SAF)
- Ground support equipment
